| Researched. Checked in 348. Thai determined allowability. See attached for inventor and interference search. It was determined that although there are many prior art that allows for adding auxiliary information to a video/photo content, it is done after the images are captured and converted, not before as claimed. Furthermore, the language wherein a degree of importance is input by the user for three separate occasions is not obvious. | 9/25/2008 | GT |
